WELLNESS CONCEPTS** are our
FORTE!

Esa Ranta

SNOWBLISS – we let it snow

Esa Ranta
Owner and
Managing Director of
Kurland GmbH

When it comes to striking wellness concepts, we are the experts. With our Kurland® “SnowBliss”, we bring elemental forces into your spa – using cutting edge spa technology. Kurland® “SnowBliss” installation is a fast and easy process.

Cooling with a winter effect:

- immediate snowfall
- perfect amount of snow
- no waiting or pre-cooling
- experience at the press of a button
- two functions
- individual design

Cooling with water is thousands of years old. Now, we conjure up heavenly snow

in your spa. At the press of a button, select between snowfall or snowstorm, and experience gentle snow sprinkling or have snowflakes swirling around you on all sides. The experience captivates with more than just its tactile experience. We have also captured the wind, thunder and lightning for you with technical finesse.

You can now offer your guests a unique kind of cooling with snow – at the press of a button, all year round.

Warm wishes,

A handwritten signature in blue ink that reads "Esa Ranta". The signature is fluid and cursive.

Esa Ranta

Experience it with all the senses – feel, hear, see...

SnowBliss offers an intense and unique experience and is more than just cooling after the sauna or steam bath.

Enjoy the power of nature up close and right in the spa.

In Scandinavia, it is traditional to warm up in the sauna in winter and then enjoy the snow for cooling. If there is no snow, then part of the Nordic ritual is missing.

With our SnowBliss, you can offer your guests this special experience all year long, independent of the climate, time of year or geographical location of your spa. We bring the Arctic into your spa. At the simple press of a button, the snow drifts down in “snowfall” mode. For a more intense experience, select “snowstorm” to be surrounded on all sides by swirling snowflakes – thunder and lighting included.

Technical advantage – the perfect amount of snow immediately with two functions at the press of a button

Kurland SnowBliss reliably provides – at the press of a button – what winter cannot always offer: the perfect amount of snow for extraordinary refreshment.

Kurland® SnowBliss is the result of needs-based research and development. The experience should occur immediately, without waiting times, and as naturally as possible. The drifting snow crystals have the properties of corn snow, as skiers know it. The snow therefore only melts on the skin – not in the air.

The effect is an extraordinarily refreshing feeling as can seldom be found in nature – and quite simply at the press of a button, at any time of year.

Exceptional wellness concepts are our forte, which is why Kurland® developed SnowBliss for easy integration in to any spa and any conceivable, individual design.

Benefits:

- immediate snow production
- perfect amount of snow
- snowfall at the press of a button
- two functions:
 - snowfall or snowstorm
- individually adjustable wind jets
- sound and lighting effects
- drifting snow crystals

Design options and technical specifications

Dimensions, connections, etc.

Options:

- SnowBliss technology for integration into existing spaces
- incl. individually customisable cabins with walls made from glass, natural stone, tiled or with individual photos

- Lighting effect with 4 LED coloured spotlights and coordinated programme
